

# SOLAR CAR CHALLENGE

3505 Cassidy, Plano, Texas 75023

Good Morning

I am writing to invite your participation in the Solar Car Challenge, an education program designed to motivate high school students in science and engineering. The Solar Car Challenge originated in 1993 and has been recognized by *Technology & Learning* as one of the top ten education programs in the country. Our program teaches high school students how to build roadworthy solar cars, and then provides a safe environment to race.

I am looking for partners who understand that our education programs are not doing enough to emphasize science and engineering. I am looking for sponsors that want to provide a life-changing education opportunity of high school students.

We presently have 65 on-going high school projects in 28 states, Puerto Rico, Canada, and India. I need your help to continue this great education program. Attached are documents that explain our project. The Solar Car Challenge is recognized as a 501(c)(3) non-profit educational organization. I would really enjoy having the opportunity to explain our program in person.

Best regards,  
Dr. Lehman Marks  
President, Solar Car Challenge
